Scalability & Future Plan

Date	30 September 2026
Team ID	[Your Team ID]
Project Name	Streamline IT Procurement: Automating Standard Laptop Orders with Workflow Automation
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Limited Concurrent Order Requests	May cause delay during bulk employee onboarding cycles	High
2	Single Vendor API Integration	Restricts procurement choices when primary supplier is out of stock	Medium
3	Manual Exception Escalation	Requires manual intervention when budget limits are exceeded	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	**User Load**	Handles up to 100 simultaneous order requests per hour	Migrate to cloud serverless architecture to auto-scale dynamically up to 10,000+ users
2	**Data Storage**	Relational database storing active orders and historical logs	Implement database indexing, partitioning, and cold storage archiving for historical records

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Multi-Vendor Integration & Dynamic Price Comparison	Q1 2027	Reduces laptop procurement cost by selecting best supplier automatically
Phase 3	AI-driven Inventory Forecasting & Asset Management	Q2 2027	Prevents hardware shortages by predicting onboarding demand
Phase 4	Mobile App for Approvals & Real-time Delivery Tracking	Q3 2027	Accelerates manager approval times to under 1 hour
